ALCOR

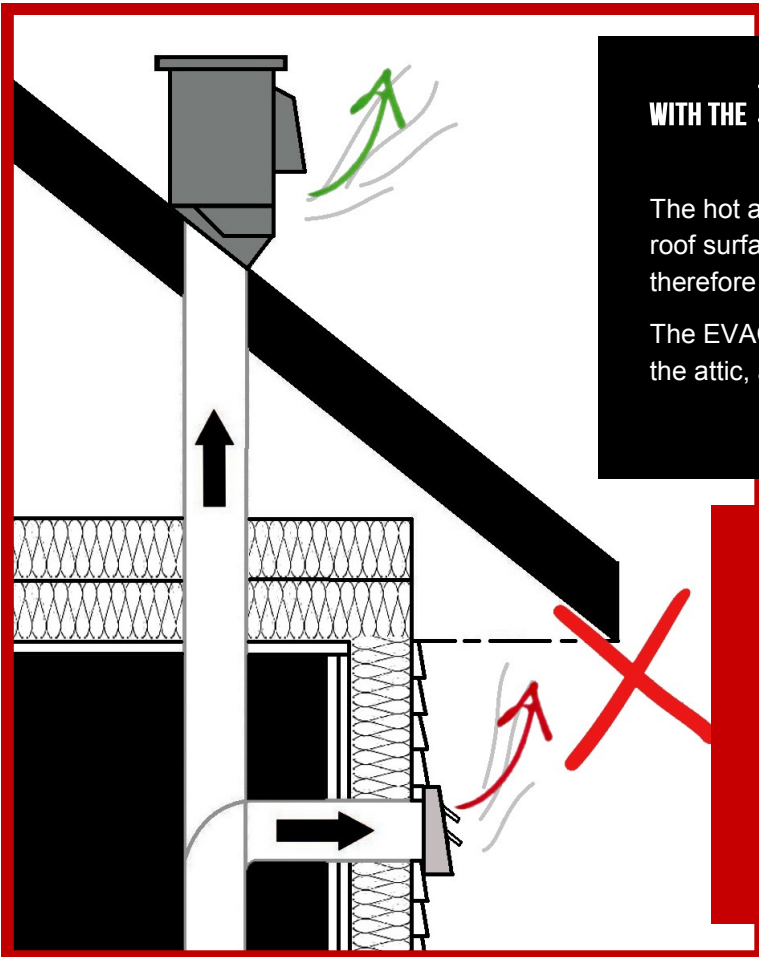

EVAC

Supreme

EVAC Supreme is the solution to heat and humidity evacuation from ventilation devices, such as bathroom fans, clothes dryer exhausts and kitchen range hoods, by allowing warm air to escape away from the building structure directly through the roof.

Maintenance may be a lot of work. EVAC Supreme's **removable cover** facilitates access and thereby, allows routine maintenance, especially removal of lint and helps reduce the risk of fire with proper maintenance.

WITH THE **EVAC** Supreme :

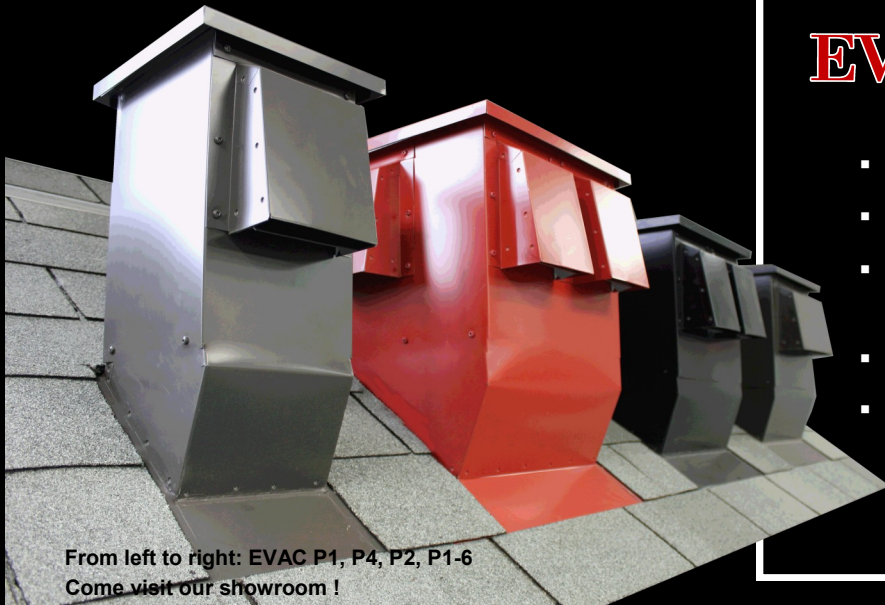

The hot air exits through the trap that is elevated from the roof surface, reducing the risk of ice dams during winter, therefore reducing the risk of water infiltration.

The EVAC Supreme solves the problem of warm air entering the attic, as encountered with wall exhaust vents.

THE SOLUTION

WITH WALL EXHAUST VENTS:

When vented outside too close to the soffit, moisture rises up and condenses in the attic, causing serious damage to the studs, roof, insulation, and other materials.
