

Temp-Emergency roof Patcher

Scellant Temporaire

LEAK STOPPER

Stop leaks yourself quickly..... Even during a rain storm!

EMERGENCY SOLUTION

Directions:

- Spread in a layer about 1/2 inch thick over the suspected leakage area, which must be wet.
- The particles will normally search out and flow to the actual trouble spot. A temporary seal will quickly be provided by the gel that forms.
- Permanent roof repair should be made as soon as weather permits.

TEST IT YOURSELF

1. Take a Styrofoam cup and poke hole in the bottom with a pen.
2. Fill cup with water and put LEAK STOPPER into cup, let the water run into another cup.
3. Watch the results as the contents will quickly form a gel that will act as a sealant.

 LEAK STOPPER residue should be removed from the roof as soon as possible. The reintroduction of water will form a slippery surface, which is hazardous to walk on.

 **WARNING!** Do not discard in a sink or toilet. Discard contents in trash container.
