

TIMELESS

WEATHERPROOFING

SOPREMA elastomeric membranes are made of SBS modified bitumen, which provides enhanced elasticity and superior flexibility. The non-woven polyester or glass mat reinforcement gives the membrane its mechanical properties. The result is a high performance, stress-resistant roof covering.

Granulated SOPREMA membranes are available in seven colours, each specially designed to blend in perfectly with the surroundings.

World-class EXPERTISE

For nearly 100 years SOPREMA has been offering innovative weatherproofing solutions that meet tough construction, civil engineering, and environmental protection standards. Because of the matchless quality of its products and its exceptional technical expertise, SOPREMA rapidly built a solid international reputation. The SOPREMA mammoth, a symbol of strength and durability, is now recognized in over 50 countries around the world.

Seamless PROTECTION

The SOPREMA warranty against manufacturing defects is valid for fifteen or twenty years, depending on the system. In addition to offering replacement value protection for non-degressive SOPREMA materials for the first ten years, the warranty is completely transferable in the event the property is sold. Choosing an industry leader is your best guarantee for outstanding protection and enhanced comfort!

Industrial-grade PROTECTION

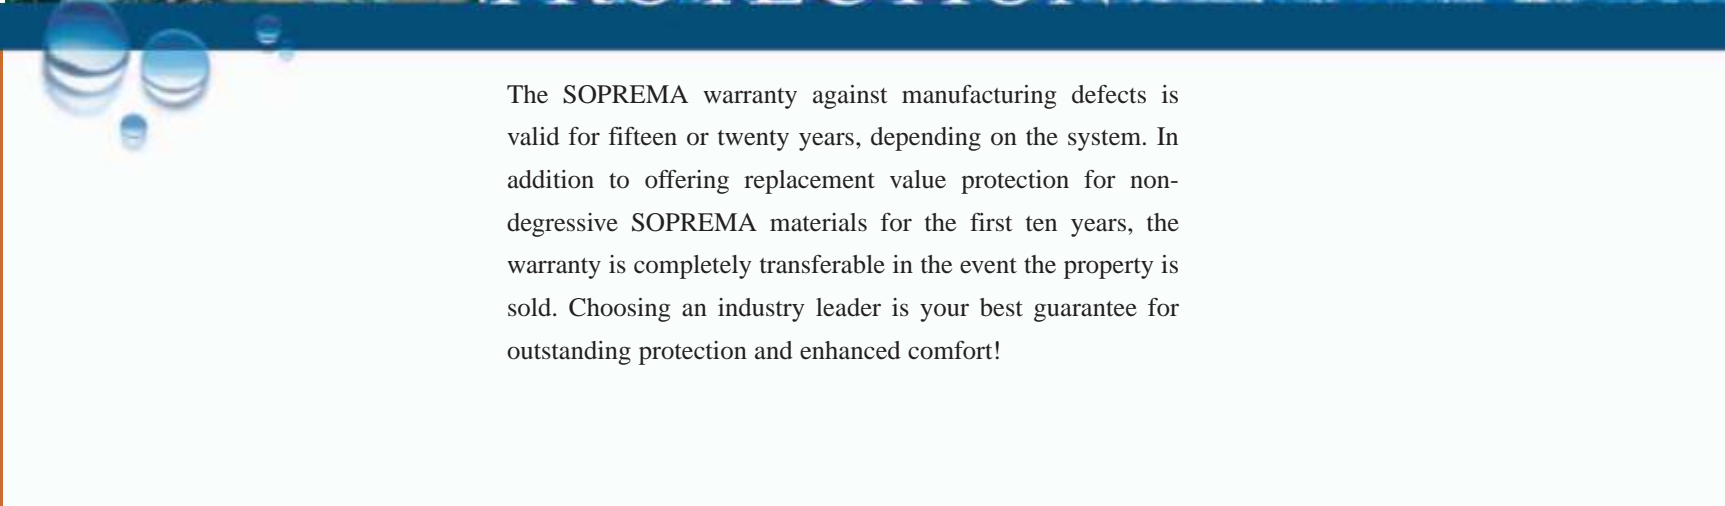

SOPREMA products were for a long time only used in the industrial, institutional, and commercial sectors where the criteria for resistance and performance are the most stringent. Today, the same technology is available to everyone. Perfectly suited to residential requirements, the new high performance SOPREMA roofing systems will provide you with timeless protection!

Innovative, cutting edge PERFORMANCE

With a research centre that is unique in Canada, a training centre for roofing contractors and applicators, a team of highly skilled, veteran researchers, and much more, SOPREMA seeks not only to constantly improve its products and how they are installed, but also to develop new weatherproofing solutions. The result? Outstanding roofing systems with exceptional properties.

► Thanks to its Canadian research centre, SOPREMA develops products and systems that meet the rigours of our northern climate.

Simple, effective SOLUTIONS

The large size of SOPREMA membranes makes them quick and easy to install. The surface can be totally weatherproofed in a few simple steps. In addition, the flexibility of elastomeric membranes allows them to mold to the most complex shapes, providing a perfect weatherproofing seal for the entire roof. Whether for low or high slopes roofs, SOPREMA provides cutting edge solutions.

ADVANTAGES TO BE DISCOVERED

Soprema roofing products

- Provide total weatherproofing protection,
- Are light and easy to install,
- Last twice as long as most other roofing materials,
- Cost less to maintain than conventional coverings,
- Do not require gravel,
- Are easy to inspect, and
- Can be installed on low slope roofs.
