532 000 MECH. SWING HOIST FRAME

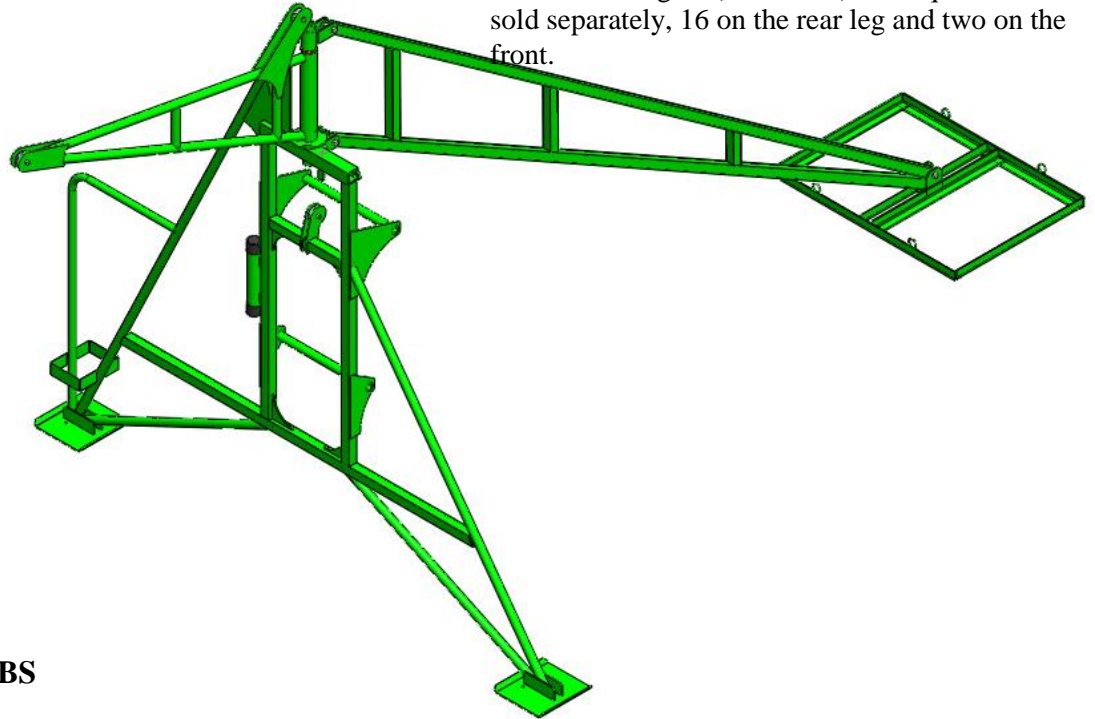

This innovative swing hoist frame uses your own ladder hoist power unit to hoist merchandise to and from the roof.

The hoist will have 250lbs (511500) or 400lbs (512500) capacity depending on the power unit being used.

If you do not own a power unit we suggest our model 512500 which will give you 400lbs capacity.

This hoist is very practical because of it's light weight and ease of use. It will allow you to work in areas where the ladder hoist would not be the solution as for example on roofs that are more than 40 feet high.

18 counterweights (# 597 000) are required and sold separately, 16 on the rear leg and two on the front.

WEIGHT: 215 LBS

Requires 18 counterweights sold separately.

Made in Canada

The manufacturer reserves the right to change specifications and designs without notice.
